ALOHA RESTORE

Dated Sub Backup and Restore Program

Radiant Systems helps Aloha POS users ensure the consistent and reliable backup and recovery of critical POS data with the Aloha Restore Program. Gain a worry-free audit capability that will last for years through this service that backs up dated subdirectories from a restaurant's POS system daily and stores them at an off-site data storage facility. Not only does this automated and affordable solution help relieve the burden of backing up store-level data, but it keeps a restaurant's Aloha POS running at its best by sending the excessive number of dated subdirectories to an external source. Users of Aloha Restore have access to the previous 400 days of dated subdirectory data through a secure and easy to use application that is run from the site.

- Dated sub directories are backed up daily as they are created by your end of day process. Up to 400 days of data will be maintained by Aloha Restore.
- Backed up directories are sent to the Radiant Systems data center by a secure transport process, so your data will be safe while in transit.
- Radiant Systems maintains a state-of-the-art data center that is highly secure and monitored around the clock. So you can rest easy knowing your data is safe and will be there when you need it.
- Should you ever need to restore your data, it will be available through an easy to use application run from your restaurant. Just a couple of button clicks and all of your backed up data can be restored in short order.
- Cost of the program is per location, billed annually. Billing occurs at the beginning of each year; therefore restaurants who wish to begin service immediately receive a prorated bill for the first year.
